Hi everyone,

Amanda must have reached out to you about the revised formaldehyde scoping document. I am attaching the response to comment document here. You would be interested to know that public heavily commented on earlier version of formaldehyde scoping document (little over 250 times). Most of the comments are related to formaldehyde exposure aspects. Few comments are related to hazard that refer to consideration of endogenous formaldehyde formation and EPA draft IRIS assessment. Some comment on EPA should immediately release the draft IRIS assessment for formaldehyde to public and EPA should take recommendations from NAS for the risk evaluation.

Take a look and let me know show stopper comments by COB July 31<sup>st</sup>. Even if there is no comment, I would like to know.

Thank you.

Best,

**-Santhini**
